

ENVIRONMENTAL POLICY

Athens International Airport S.A. (AIA) is fully committed to act responsibly while operating and developing the "Eleftherios Venizelos" airport. Protecting and caring for the environment, preventing negative impacts and minimizing annoyance for local communities when it is not possible to eliminate it entirely, are a commitment and a priority.

Our commitment is a strategic decision that entails:

- improving our environmental performance through continuous monitoring of environmental conditions, providing timely and accurate information to the stakeholders and the public, and undertaking initiatives to effectively and responsibly manage environmental challenges,
- creating balanced sustainable value for the benefit of all our stakeholders, including our passengers, business partners, employees, local communities and shareholders, as well as society in general,
- complying with all relevant legislation and regulatory requirements as well as applying best environmental practices,
- ensuring our procedures and practices reflect our dedication to environmental protection, thus leading to continuous reduction of our environmental footprint,
- communicating with all stakeholders within a framework of cooperation and mutual respect, exchanging information and promoting environmental education, and
- reviewing and regularly renewing our environmental targets and publishing our activities and results in a transparent fashion in our annual corporate publication "Care for the Environment".

In recognition of the significant challenge of climate change, an issue of utmost importance, AIA is committed to prioritizing reductions in greenhouse gas emissions under its direct control while also urging all its contractors, concessionaries and other entities operating at the airport to participate in this effort. Our personnel is strongly encouraged to develop, update and implement measures focused on reducing greenhouse gas emissions and maximizing energy efficiency in our operations and infrastructure.

We continuously strive to cultivate a culture of caring for the environment within the entire Airport Community.

Dr Yiannis N. Paraschis
